

**Since
2010**

ABOUT US

We have been developing mobile apps for iOS and Android since 2010. Our main focus is geospatial apps though we have developed a number of mobile apps for other segments as well. Our apps have more than 2,000,000 downloads in total.

EARTHQUAKE+

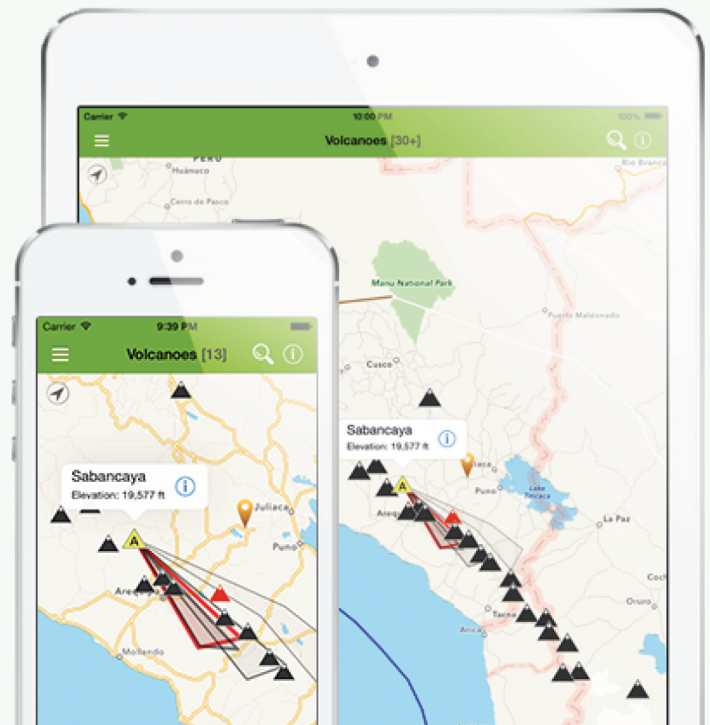

With over 800,000 downloads our popular Earthquake+ app is the best earthquake monitoring app in the world! The app not only shows seismic activity around the globe, but also provides useful information about tsunamis and volcanoes. Earthquake+ provides easy to setup, unlimited push notifications about seismic activity. The app has access to 6 years of seismic data. Earthquake+ features fully customisable alerts, filter, list and map. The app uses seismic data from 21 global data sources, provides earthquake and location search. It is featuring an unparalleled SMS, Email, Facebook and Twitter integration. The app supports Apple Watch and is the only earthquake app to display focal mechanisms and moment tensors.

VOLCANOES

Volcanoes app is not only the most comprehensive app to display volcanic activity around the globe, but also the only app in the world to show volcanic ash clouds in near real-time (as per the data provided by a number of international Volcanic Ash Advisory Centers).

2M+
downloads
in total

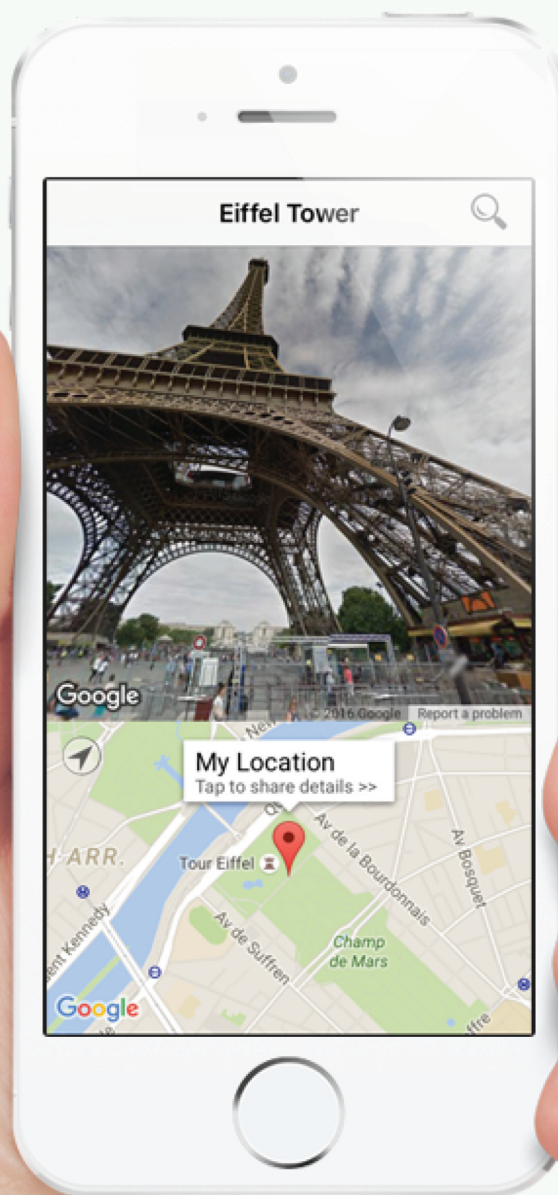

Featuring most popular volcanoes info, recent volcanic activity, push notifications and recent earthquakes information, the app is an indispensable tool for everyone interested in Earth Science. This is one of the reasons our Volcanoes app is so popular among educational institutions around the world, with more than 300,000 downloads and counting.

The app is used by many volcano enthusiasts and professional pilots as it provides helpful information on multiple aspects of volcanic activity.

SELFIE MAKER

Selfie Maker is a fun app which allows users to create fake selfies in almost any location on the planet. We are offering our users a new way of faking location while being creative and having a bit of fun.

The app can also be used as a photo editor where user can replace a background of a photo, edit photos and apply various effects or use multiple graphical elements from the app's library to visually improve the photo.

**Fun
app!**

DIGGER'S MAP

Thousands of amateur geologists, mineral enthusiasts and hobbyist prospectors are using our unique Digger's Map app around the world to search for gold, silver and various minerals. Our app is offering information about more than 300,000 international locations and 60+ minerals.

The users can also save their own locations and synchronize the data between multiple devices.
